New Construction and Modifications

Design Standards

Sustainable Development

The Sustainable Development Standards incorporate sustainability components and City of Atlanta ordinance requirements into all Department of Aviation projects. The Sustainable Development Standards should be recognized as best practices and will contribute to the Airport's overall sustainability goals of reducing energy and water consumption, waste generation, and greenhouse gas emissions.

P&D requests that the Sustainable Development Standards be implemented in all Concession projects at ATL to the greatest extent possible. This implementation is voluntary and in no way a contractual requirement. However, incorporating the components will support reducing utility usage and gas emissions, helping to lower overhead costs and improve the indoor and outdoor environmental quality for passengers, concessionaires, and employees.

The standards can be accessed by clicking [here](#).
